

Environmental Policy

Philosophy

InfraScan Thermal Imaging Pty Ltd recognises that environmental protection is a vitally important business and social issue. By utilising our technological expertise in the Thermal Scanning industry and our creative talents, we seek to contribute to the promotion of sustainable development. In addition, while observing all environmental regulations in our business operations, we are actively pursuing environmental protection activities on our own initiative. Through our individual and collective actions, we will continuously strive to safeguard a rich natural environment for future generations.

We are deeply committed to safeguarding the environment and preventing pollution - now and for future generations.

Principles

- Reduce environmental impact throughout the product lifecycle.
- Conserve energy and natural resources.
- Practice reduce/reuse/recycle approach.
- Reduce risks to human health and the environment from the use of harmful chemical substances or waste.
- Help customers reduce environmental impact and improve environmental efficiency through our Thermal Scanning services.
- Encourage employees to work to improve the environment

Management Goals

- We are committed to training and informing our staff on environmental matters.
- We follow a process of continual improvement in all aspects of our business; this takes into consideration the impact of our business on the environment.
- We adhere to environmental standards and legislation, where applicable.
- We establish programs for the recycling of products and waste, and are committed to reducing energy consumption in our products and operations.
- We work with our suppliers to ensure that they in turn give thought and consideration to the impact of their processes and products on the environment.
- We work closely with our customers to identify ways in which together we can improve awareness of, and impact on, the environment.
